

Zense Submission:

-IMT2021525 (Achintya Harsha)

Event organization nowadays is a tedious job. The event must be planned, the flow should be structured, participants should be approached, and the smooth flow should be overseen.

Also, it should be kept in mind that the information should be freely available to all the participants to make the event hassle free and enjoyable.

That is why I have designed a website that will facilitate all of these.

The website is named SimplyOrg. The website employs a simple system of organization - (anybody formed by a college, friends, or committee) and events- (can be a gathering, competition, or a speech).

For example, if liitb is conducting Infinite and Spandan, the org would be liitb and the events would be iitb.

A person can create an organization and he will be appointed as the admin for the org. He will be given the admin rights, i.e., to create, edit and delete events from the organizations.

Now any other person can join this organization and join the underlying events. This will inform and keep them updated.

This project is not yet completed as I have some other features in mind.

- 1) Enabling users to register or RSVP for an event
- 2) The website will have its own form builder through which the admin can create forms for registration for events like a competition
- 3) If an event is a competition, then there will be an option to generate fixtures for the match.
- 4) Live standings table for each round of completion will be available

5) Also, if it wants to conduct an inter org event, like 'IISC vs IIITB' it will facilitate it by having features like sending invites to guest orgs and team creation for team events

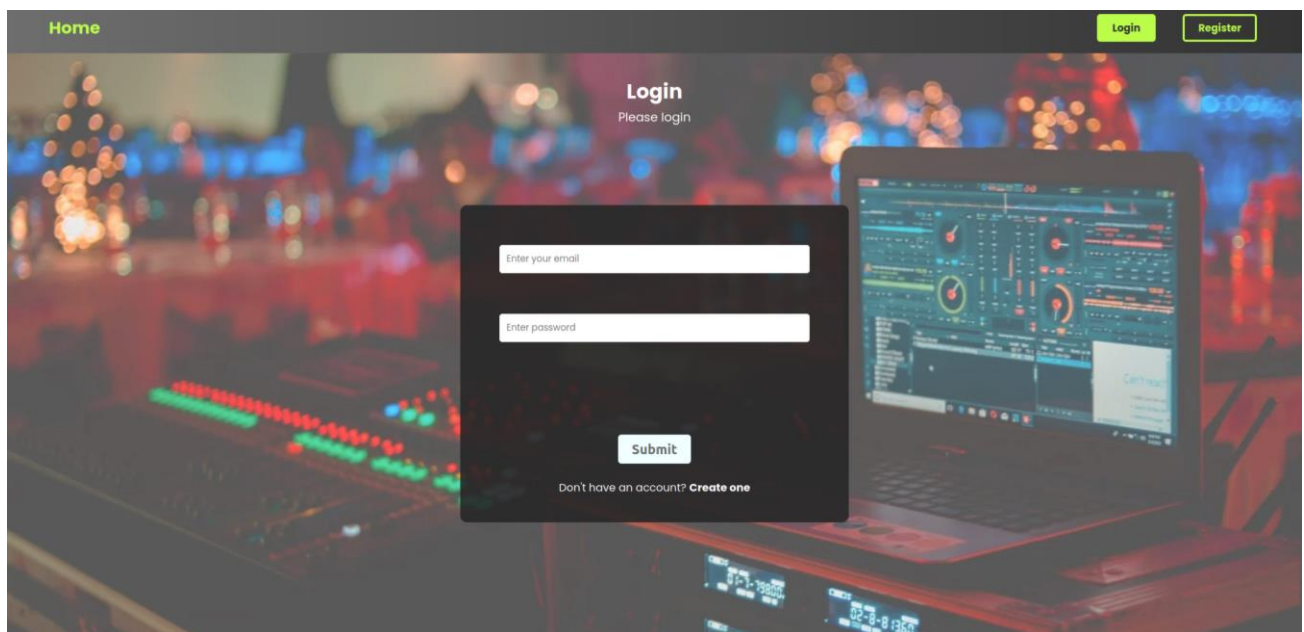

Steps to use

You should have node.js and npm installed in the PC. Unzip the folder and run the “npm install” command in the root server and once again run the “npm install” command in the “frontend” folder.

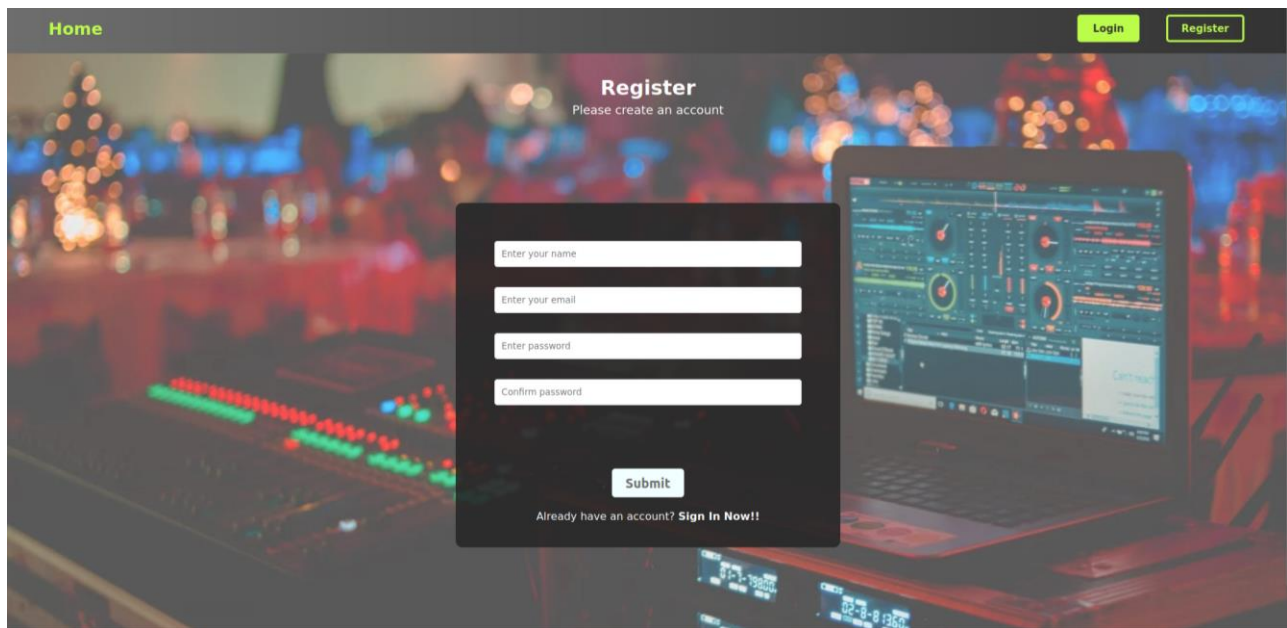

This will install all the prerequisites.

Then in the root directory, run 'npm run dev'

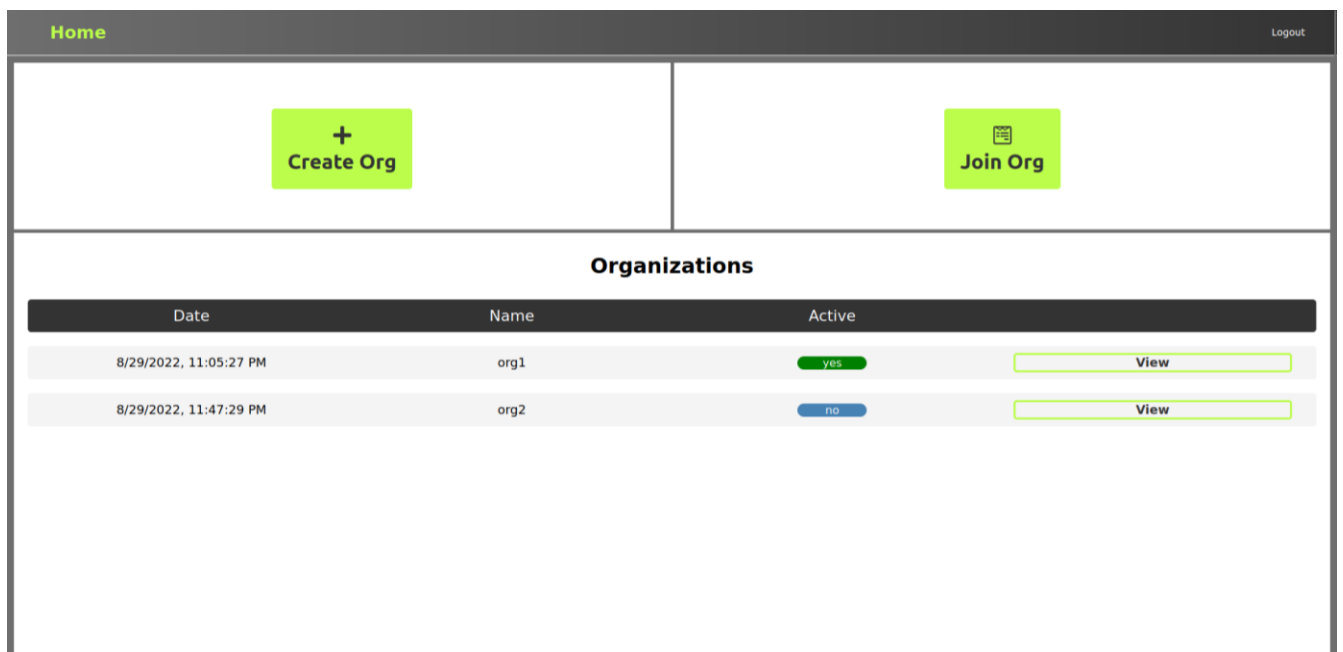

1)It has a login screen where user can login

2)If an account does not exist you can create one using the register.

3) Once an account is created, you will be redirected to the main page

4) You can select on Create Org Button. This will create a new org with you as the admin

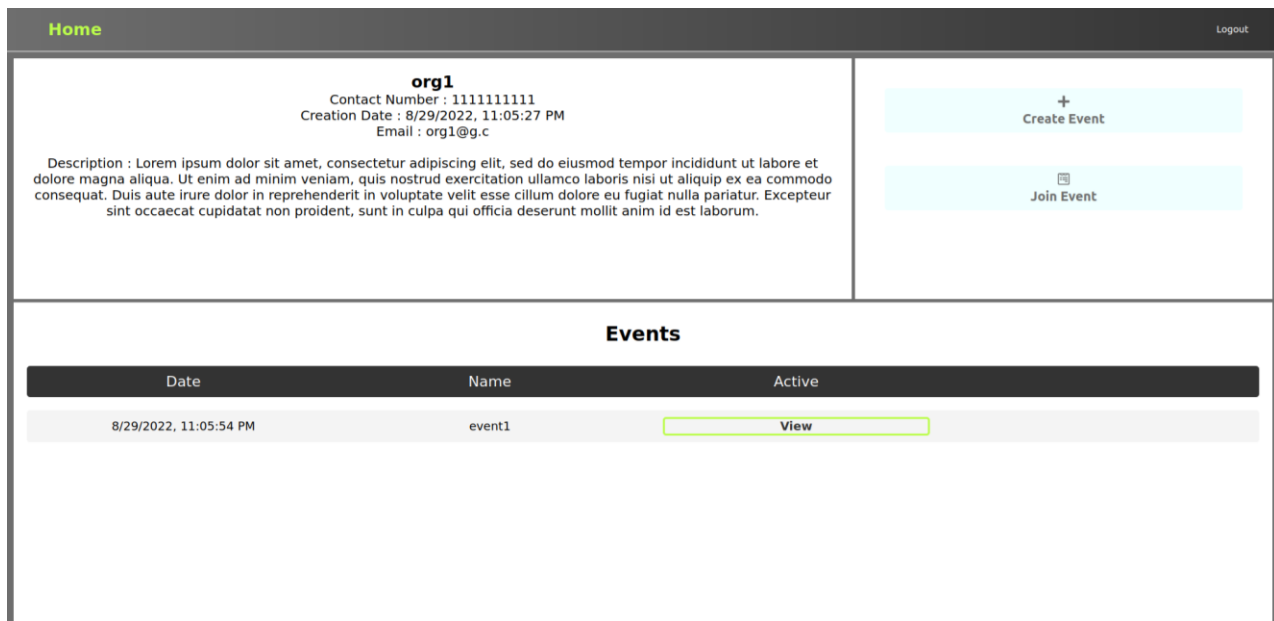

The screenshot displays a web application interface. At the top, a dark grey header bar contains the word "Home" in green on the left and "Logout" in white on the right. Below the header, a central modal window titled "Create organization" in bold black text is open. The modal has a light blue border and a close button (an 'X' in a circle) in the top right corner. Inside the modal, there is a dark grey form with four input fields, each with a label and an asterisk indicating it is required: "Enter organization name", "Organization email", "Organization ContactNo", and "Description". Each input field is a white rectangle. At the bottom of the form is a white "Submit" button. In the background, a table is partially visible with a header row containing "Date" and two data rows, each showing a date and time (8/29/2022, 11:05:21 and 8/29/2022, 11:47:21) followed by a "View" button.

5) You can also click on the join org button to join an existing org.

You can search for the orgs in the search bar

6) You can click on view org, then get org details and the events in the org.

7)The section on the top left shows the organization details. You can click the create event to create a new event. This will appear only if you are the org admin.

The screenshot shows a web application interface with a dark header bar containing 'Home' and 'Logout'. The main content area displays organization details for 'org1' with a contact number '1111111111'. A modal titled 'Create Event' is open, featuring a light blue background and a dark form area. The form includes fields for 'Enter event name', 'Start Date' (dd/mm/yyyy), 'End Date' (dd/mm/yyyy), 'Start Time' (hh:mm), 'End Time' (hh:mm), and 'Description'. A 'Submit' button is at the bottom right of the form. The background shows a table with columns 'Date' and 'Event'.

8)Or you can join an existing event. You can search for the event using the search bar.

The screenshot shows the same web application interface. A modal titled 'Search Events' is open, featuring a light blue background and a dark form area. It includes a search input field with the text 'ej', a list of search results showing 'event1', and a 'Join' button. The background shows the same organization details and table as the previous screenshot.

9) You can also get details about existing events by clicking on view

Event name: event1
